NESFlix by Don Miller / NO CARRIER

www.no-carrier.com

DESCRIPTION

The NESFlix Conversion Tool is a cross platform program to create an NES compatible array of CHR pages from an animated GIF for use with NESFlix. Simply select a 128x128 4-color GIF and the tool will handle the conversion to 2BPP and pack the frames into a file that NESFlix can read natively.

OPTIONS

MMC3 / MMC5

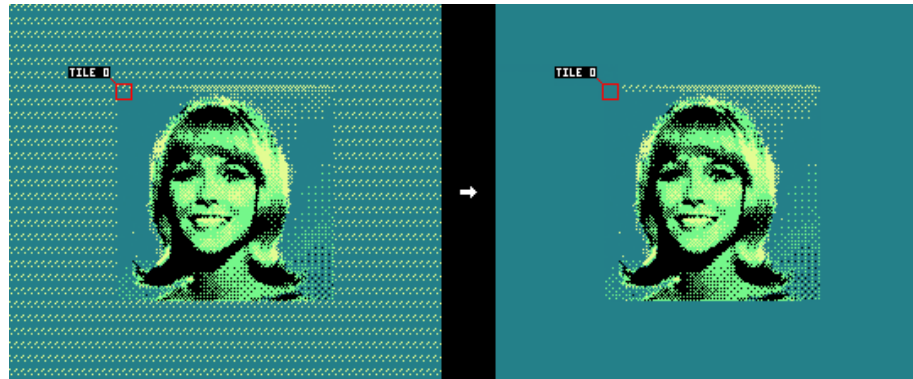

This option will affect the output format based on your intended mapper, MMC3 supports up to 64 frames / MMC5 supports up to 256. Be sure to use MMC3 if you intend on using the ROM on a Powerpak. The tool will automatically pad out any unused frames so that the CHR will align correctly with the ROM.

AUTOCONVERT

EXPERIMENTAL - Works on some GIFs, will perform 4 color conversion and 128x128 resizing. Use the Photoshop tutorial for best results.

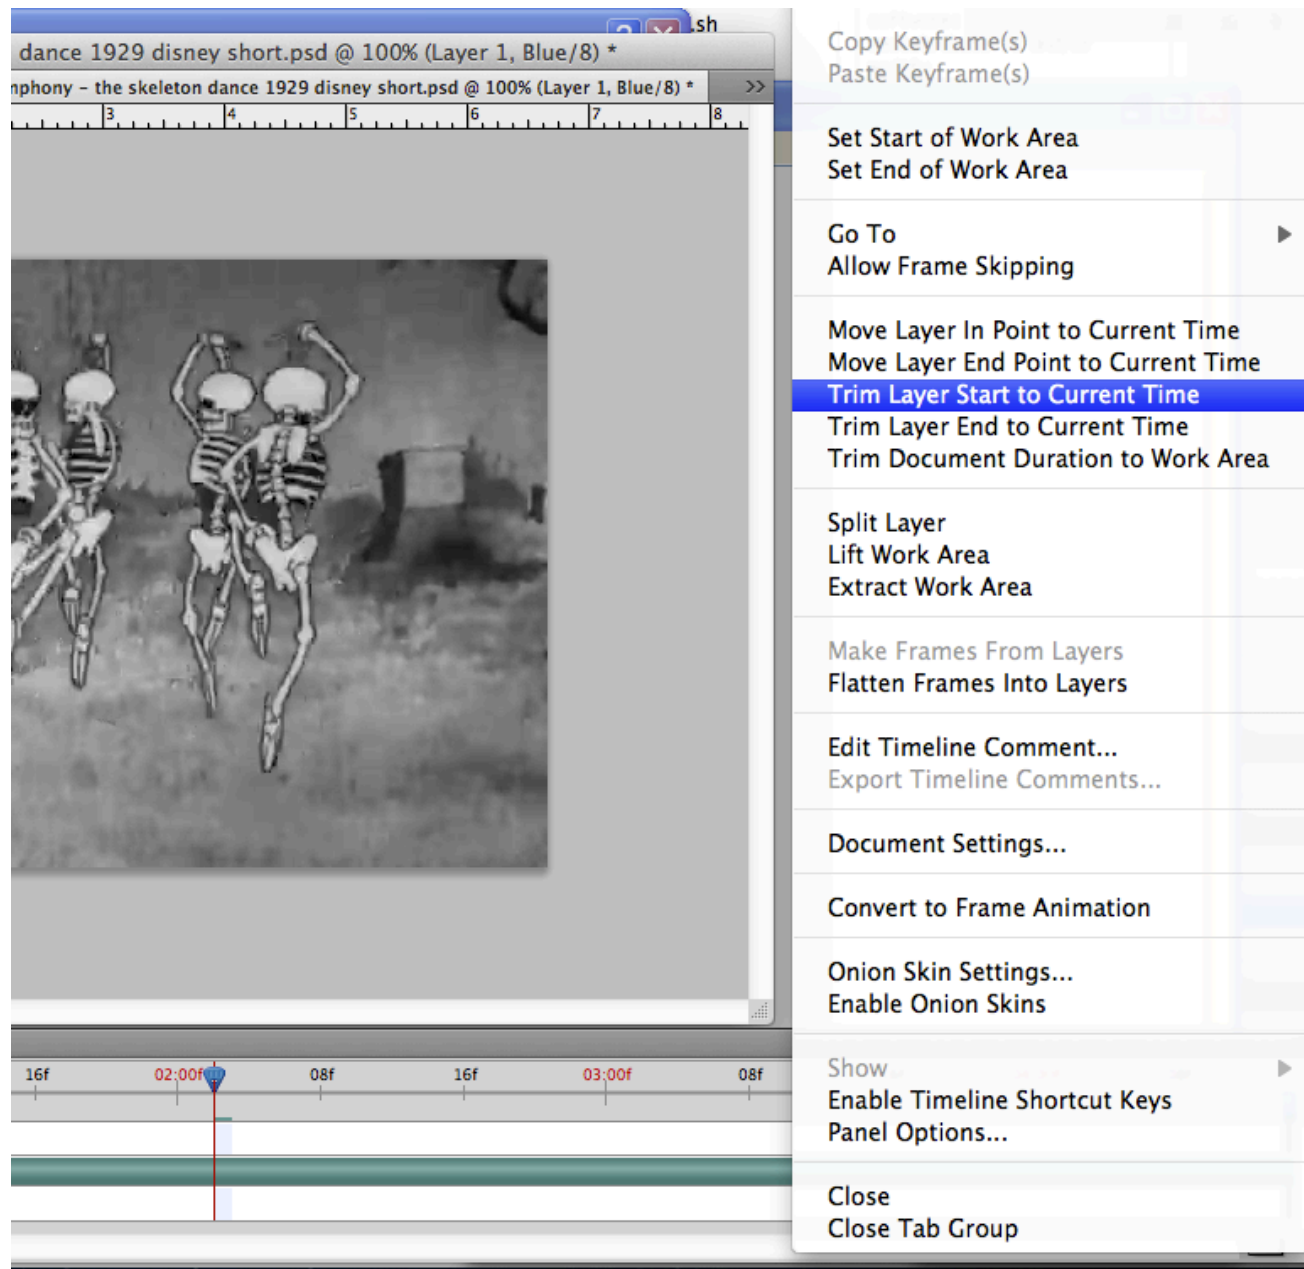

DELETE FIRST TILE OPTION

Since we are using an entire CHR page to display the video there are no available blank tiles to fill the rest of the screen. This option allows you to delete the top left corner tile to provide a solid fill for the unused space.

BRIEF PHOTOSHOP TUTORIAL

Open up an MP4/AVI in Photoshop, use the trim settings until you create a loop that you're happy with. Don't forget to watch your frame count, 64 for MMC3 / 256 for MMC5.

Select "Save for Web & Devices", play with the dither settings to see what looks best. Be sure to set the output to GIF. Reduce to 4 colors. Uncheck "Transparency" otherwise the gif will result in only 3 useful colors. The size also needs to be changed to 128x128, these are the dimensions of a full CHR page. Don't worry about what the preview looks like in terms of color, as long as there are only 4 the tool will be able to properly create the CHR, the NES palette ultimately decides how they will display.

◀◀◀▶▶▶▶▶

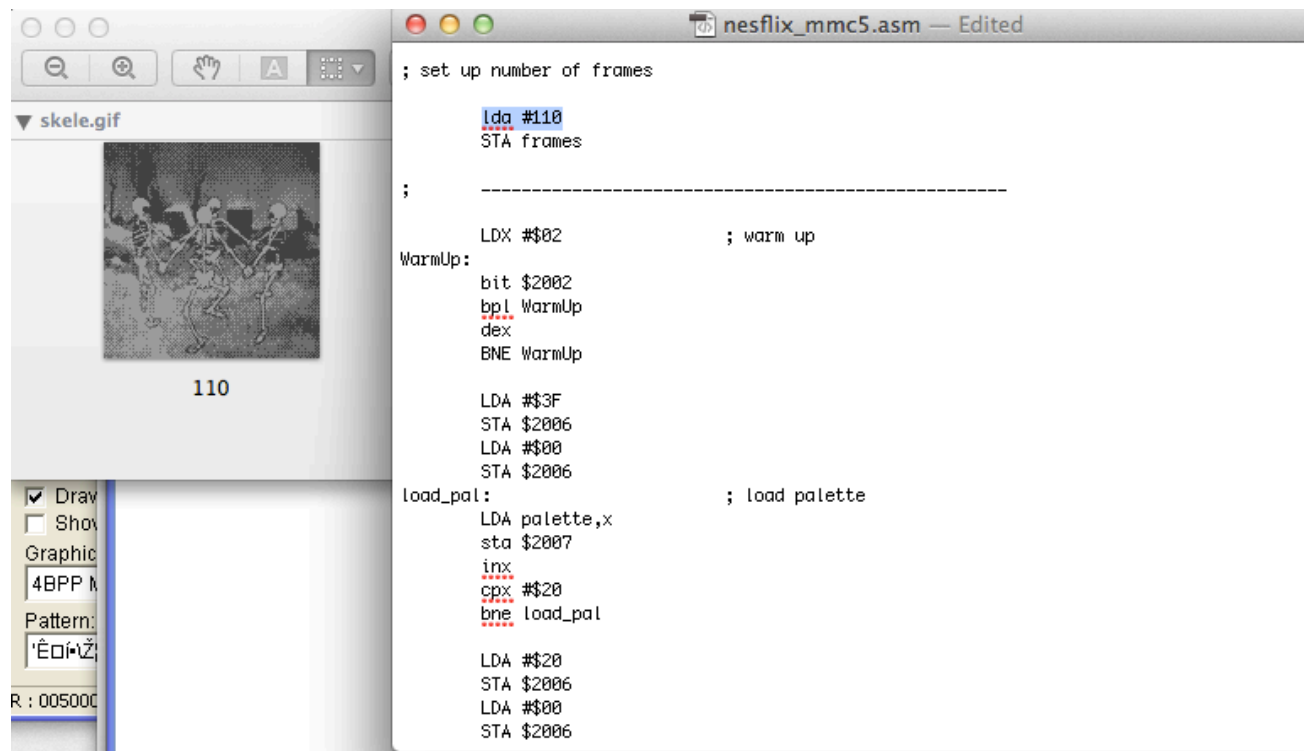

Open up the NESFlux conversion tool, click the CONVERT button and select your file. This should create a <filename.gif>.chr in the current directory.

Edit the appropriate compilation file to include the new CHR movie.

```
asm6 nesflix_mmc5.asm temp.bin
copy /b mmc5_header.bin+temp.bin+temp.bin+temp.bin+temp.bin+skele.gif.chr nesflix_mmc5.nes
del temp.bin
pause
```

Don't forget to edit the number of frames in the source to make sure the movie loops properly!

Compile and enjoy.
